

ABSTRACT OF THE DISCLOSURE

2 Novel food, dietary supplement and nutraceutical products containing
3 phenol/protein complexes derived from vegetable sources have high antioxidant activity
4 and very high levels of protein. The products provide novel means for administering high
5 levels of plant antioxidants to human and mammals in the form of a protein concentrate.
6 Due to their high antioxidant capacity these novel products are useful as aids in the
7 prevention and treatment of many diseases.
